| <b>7</b> | Overhead R    | Engineer discretion | <b>14</b> | IEM mix* **    | Band provided IEM and Transmitter        |

\*Check with band at or before engagement to confirm requirement for show.

**Monitor Mix Preferences** Vocalists generally prefer their own vocal prominent in the mix, with the rest of the band at a moderate supporting level. The drummer prefers an even mix of the full band. All mixes are intended as a starting point and are flexible based on venue, stage size, and engineer discretion. \*\*IEMs occasionally used by lead vocalist and would require line level mix.

**Power Requirements** Six(6) standard 120V /outlets preferred rear of stage (left, right, drums) and at or near each mic stand front of stage. Flexible based on venue capabilities.

**Additional Notes** High Voltage Seattle provides standard backline and is experienced working with house, festival, and casino production teams. All technical details are flexible and intended to streamline load-in, soundcheck, and performance.
